

Project Executable Files

Date	29 September 2026
Team ID	SWTID-2026-5841
Project Name	FitBuddy – AI Fitness Plan Generator
Maximum Marks	3 Marks

Project Executable Files

All executable and deployable files of FitBuddy are available in the GitHub repository so an evaluator can run the solution with the provided instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes (README.md)
3	requirements.txt / package.json / dependency file	Yes (requirements.txt, requirements-dev.txt)
4	Database schema / seed files (if applicable)	NA (schema is created automatically from the SQLAlchemy model)
5	Environment configuration file (.env.example or similar)	Yes (.env.example)
6	Deployed application URL (if hosted)	NA (runs locally)
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	Yes (Dockerfile)
9	Test files and test results	Yes (tests/test_app.py); results to be attached
10	Demo video or walkthrough (if required)	Pending

Step 2: File / Folder Structure

```

/FitBuddy
/app
  main.py           FastAPI app, exception handlers
  routes.py         HTTP routes and admin auth helper
  schemas.py        Pydantic input models
  database.py       SQLAlchemy model and CRUD helpers
  gemini_client.py  Gemini call with retry and backoff
  gemini_generator.py Workout plan and plan update prompts
  gemini_flash_generator.py Nutrition tip prompt
/templates         index, result, all_users, error pages
/static            style.css, app.js
/tests            test_app.py
run.py            Starts the server
  
```

Dockerfile	Container image
requirements.txt	Dependencies
requirements-dev.txt	Test dependencies
.env.example	Environment variable template
README.md	Setup and run instructions

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted; runs locally at http://127.0.0.1:8000
Login Credentials (Demo)	Regular users need no login. Admin username and password are set in the .env file (ADMIN_USERNAME, ADMIN_PASSWORD) and will be shared with the evaluator separately.
Platform / Hosting Provider	Local machine or Docker container
Repository Link	https://github.com/Dhanush-05-AI/fitbuddy-1
Demo Video Link	[add link if required]

Step 4: Run Instructions

Pre-requisites: Python 3.12, Git, internet access and a Google Gemini API key.

```
git clone https://github.com/Dhanush-05-AI/fitbuddy-1.git
cd fitbuddy-1/FitBuddy
python -m venv venv
source venv/bin/activate           (Windows: venv\Scripts\activate)
pip install -r requirements.txt
cp .env.example .env              (then edit .env and add your keys)
python run.py
# open http://127.0.0.1:8000 in a browser
# optional: pytest -q              (needs requirements-dev.txt)
# optional: docker build -t fitbuddy . && docker run -p 8000:8000 --env-file .env fitbuddy
```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Admin routes /view-all-users and /delete-user do not yet enforce the admin password	Fix: add dependencies=[Depends(require_admin)] to both routes; then re-run tests
2	Needs internet and a valid Gemini API key; free-tier limits can slow responses	Retry with backoff is built in; use a key with sufficient quota
3	SQLite suits a prototype, not many simultaneous users	Switch to PostgreSQL through DATABASE_URL for larger deployments
