

Define Problem Statement

Brainstorming & Ideation · AI/ML and GenAI Track

Many people want to start exercising but do not know what to do each day, how hard to push, or how to adjust a routine that does not suit them. Personal trainers are costly, and generic plans found online ignore a person's age, weight, goal and preferred intensity.

Problem statement: How might we give anyone a safe, personalised, easy-to-follow weekly workout plan, and let them refine it in plain language, without needing a personal trainer?

Element	Description
Who	Beginners and casual exercisers (age 13+) who want guidance
What	A structured 7-day plan plus a nutrition/recovery tip tuned to goal and intensity
Why it matters	Lack of guidance leads to skipped workouts, injury, or quitting
Current alternatives	Personal trainers (expensive), generic online plans (not personalised), trial and error
Success looks like	A plan generated in seconds that the user can adjust with simple feedback

Problem statement canvas

I am	I am trying to	But	Because	Which makes me feel
A beginner who wants to get fit	Follow a routine that suits me	Generic plans do not fit my age, goal or level	They are not personalised and cannot be changed	Overwhelmed and likely to quit
