

Project Executable Files

Project Documentation · AI/ML and GenAI Track

Run locally

- Create and activate a virtual environment: `python -m venv venv`
- Install dependencies: `pip install -r requirements.txt`
- Create a `.env` file with `GOOGLE_API_KEY`, `ADMIN_USERNAME` and `ADMIN_PASSWORD` (optional: `GEMINI_WORKOUT_MODEL`, `GEMINI_TIP_MODEL`, `DATABASE_URL`).
- Start the server: `uvicorn app.main:app --host 0.0.0.0 --port 8000`
- Open `http://127.0.0.1:8000` (API docs at `/docs`, health check at `/health`).

Run with Docker

- `docker build -t fitbuddy .`
- `docker run -p 8000:8000 --env-file .env -v fitbuddy-data:/data fitbuddy`

Executable / deployment files

File	Description
requirements.txt	fastapi, uvicorn, jinja2, sqlalchemy, python-multipart, google-genai, python-dotenv
Dockerfile	python:3.12-slim image; installs dependencies; serves with uvicorn on port 8000
app/	Application package
templates/ and static/	User interface files

Important: never commit or share the real `.env` file. Provide a `.env.example` with empty values instead, and rotate any key that has been shared.
